Gravity Caddo	2.25	2.25	2.25
Homer	2.25	2.25	2.25
Montana's Oil Well			
J. E. Fisher, of the Fisher Oil company, died suddenly at his home in Pittsburgh at 5 a.m. November 12, 1919. Fisher will be remembered by all the old timers as one of the very first men to arrive on the scene of oil operations on oil creek and is said to have been the oldest man to make oil continuously in the oil game.			
H. E. McDonald is Dead.			
H. E. McDonald of Tulsa, Okla., died at home Saturday morning, Nov. 12. He will be buried today from the family residence. Mr. McDonald was well known by all the old timers as one of the very first men to arrive on the scene of oil operations on oil creek and is said to have been the oldest man to make oil continuously in the oil game.			
The Tuolumne Pool.			
The Tuolumne Oil Company No. 15, Williams in the southeast of oil 24-1 is running tubing and will put the well on the market at \$1,000 per barrel. The operator has only two feet of sand in the oil base, but a few feet which filled the casing to within 35 feet of the surface, making about 60 feet of pay.			
Mr. Martin leaves three sons and lost one who died with the influenza while in the army. He was very prominent in oil circles in Ohio and had many friends who were strongly attached to him during his life.			
Banked Increase of Capital.			
The stockholders of the oil company of 6 & 7 are at meeting held in their office at 2014 N. May Wright building, Tulsa, November 12, ratified the former action taken by the directors to the end of increasing the capital stock to \$2,000,000. The stockholders also voted to increase the officers at the same place on December 2. This company is as much of a family affair as any ever organized in the mid-continent oil field. The stockholders are to join forces with Mr. Wilson and will hold the stock closely with none for sale or would fade in on the markets in New York or elsewhere. They have started up right and Mr. Wilson is a real oil producer.			
Oil Well Supply Meeting.			
The annual gathering of the managers of departments and head salesmen of the oil well supply company is being held at the oil well supply company's new sales office here. J. D. Hartley opened the session with a fine summary of the past business and an outline of the future of the big concern was discussed. Conditions were discussed by J. D. Lemos. Plymouth Maudlin carriage was boasted by C. O. Lee and rubber belts by E. G. Jefferson whose line has been made famous by the oil well sales men.			
After luncheon the party was photographed at the company's building and in the afternoon went over a number of kindred topics. The evening was spent at a local theater where reservations had been made.			
Among the out of town visitors are Louis B. Hirsch, president W. B. Oliver, manager of sales; J. F. Gribble, chief engineer; W. G. Henning, representing Leesona and Sons; E. A. Stark's of the Durable Manufacturing company; and H. E. Denney of the Imperial Refining company. And of course those mentioned above.			
The consensus of opinion among all present was that the coming fall and winter would see the big oil trade in the mid-continent field ever known.			
Welbeck Well Showing.			
The Kingwood Oil company No. 1 Diesel in the southeast of the northeast corner of oil 24-10 is showing 100 barrels better than 200 barrels after being shot in waiting on pipe line connections. It called attention to the fact that there is a lot of good likely looking territory in the area just west of the well which had 55 feet of sand at a total depth of 2,645 feet which ought to be much development in that direction. A rig is up for a second well.			
The following report of drilling operations further south has been held up for about a week owing to lack of space.			
The Mitchell test in oil 24-10 is still doubtful and will be followed and will be watched with the greatest interest. It has been located with great care with reference to the geological formations and is not made public by the oil well company by the Mitchell Oil Company in 18-7-10.			
The Tulsa Oil company well in 14-8 is being plugged at 2,600 feet.			
The Gladys Belle No. 2 half mile north of oil 18-10 is being drilled at 2,640 feet and is still doubtful and will be followed and will be watched with the greatest interest. It has been located with great care with reference to the geological formations and is not made public by the oil well company by the Gladys Belle Oil Company in 18-7-10.			
The Gladys Belle No. 2 half mile north of oil 18-10 is being drilled at 2,640 feet and is still doubtful and will be followed and will be watched with the greatest interest. It has been located with great care with reference to the geological formations and is not made public by the oil well company by the Gladys Belle Oil Company in 18-7-10.
